

How to Convert or Extract the Text

1. Using Adobe Acrobat Pro

- Open your image-based PDF in Adobe Acrobat.
- Go to the **Scan & OCR** tool.
- Select **Recognize Text > In this file**, then click **Recognize Text**.
- Once processed, the text will become highlighted, searchable, and editable.  Adobe +4

2. Using Free Online Tools

- If you do not have Acrobat, you can use browser-based tools to make the PDF searchable.
- Upload your file to the [Adobe Acrobat Online OCR Tool](#) to apply text recognition directly in your web browser.  Adobe +1

3. Extracting in Bulk via Programming

- If you have hundreds of documents and need to extract text automatically, developers often use open-source OCR engines like Tesseract.
- You can find programmatic examples and scripts for this process on the [GitHub Text Extraction Repository](#).
